Dear Sirs. I am interested in your job offer. I am a graduate of the Poznań University of Technology in Automation and Robotics and currently work as a "programmer and robotics specialist" at Technika Spawalnicza.

My adventure with programming and robotics began in High School where I attended a class with an IT profile. Then, after graduation, I began studies in the field of Automation and Robotics at the Faculty of Computer Science at the Poznań University of Technology. During my studies, I worked at Mały Inżynier, where I taught programming and robotics classes for children. After graduating and obtaining a Master of Science degree in engineering, I started working at Pebos IT as an IT technician. In this job, I was responsible for, among other things, programming AVR microcontrollers, developing a sales application (in PHP) and IT helpdesk. The next stage of my professional career is the company Technika spawalnicza where I currently work. My duties at work include, among others, programming offline and online of robots, conducting training in offline and online programming, calibration of robotic systems for offline programming, robot service, developing application for offline robot programming (DTPS) by creating scripts (C++). Currently, in addition to the robotics, I am involved in writing and implementing CRM web application. I wrote the back-end using Laravel, PHP and MYSQL and the front-end using Bootstrap and JavaScript.

I am interested in full-time work. I can start working 3 months after the decision to hire me (I am subject to a 3-month notice period with the option of potential shortening at my current employer). I would be grateful for allowing me to present my candidacy during a direct job interview.

Best regards

Karol Jędrzejak
